DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In claims 9 and 16, lines 1-2, "wherein said dielectric layer" is changed to -- wherein said first dielectric layer--.

In claim 20, line 1, "The GPS microstrip antenna of claim 20" is changed to --The GPS microstrip antenna of claim 19--.

Allowable Subject Matter

2. Claims 1-20 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The primary reason for the allowance of claims 1-16 is the inclusion of the limitations of each of the antenna elements being positioned at an angle of approximately forty five degrees on the first dielectric layer; and the diode limiter and the amplifier providing for an overall gain of approximately 27 decibels. It is these limitations found in each of the claims, as they are claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

The primary reason for the allowance of claims 17-20 is the inclusion of the limitations of each of the eight antenna elements being positioned at an angle of approximately forty five degrees on the first dielectric layer; and the diode limiter and the amplifier providing for an overall gain of approximately 27 decibels. It is these limitations found in each of the claims, as they are claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

Channabasappa et al. (US. 2004/0090368) discloses a microstrip antenna array comprising a dielectric layer; a plurality of rectangular shaped antenna elements mounted on the upper surface of the dielectric layer, the antenna elements being aligned with one another; an antenna feed network mounted on the dielectric layer for connecting each of the antenna elements to an antenna feed network input terminal; and a ground plane affixed to a bottom surface of the dielectric layer. However, Channabasappa et al. does not disclose or suggest each of the antenna elements being positioned at an angle of approximately forty five degrees on the first dielectric layer; and the diode limiter and the amplifier providing for an overall gain of approximately 27 decibels.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
